HENINE BOUTIQUE · TEAM GUIDE · OCTOBER 2026

WhatsApp in your shop

Everything the website and the admin do with WhatsApp: what customers see, what the team uses every day, and how to do each task step by step.

Your shop's WhatsApp number: 0554 65 07 18 (set in the admin; every button follows it).

How it works: every WhatsApp button opens WhatsApp on the phone or computer with the message **already written**. Nothing is sent by itself: the person checks the message and taps send.

Inside: 1. Setup · 2. What customers see (11 places) · 3. What the team uses (10 tools) · 4. Step-by-step tasks · 5. Good practice and limits

1. Setup: one number for the whole shop

All the store's WhatsApp buttons use one number. Change it in one place and every button follows.

1. Admin → **Paramètres** **الإعدادات** → the **Contact & réseaux** **الاتصال والشبكات** tab.
2. Type the number in the **WhatsApp** field, the way you'd say it: *0554 65 07 18*. A *wa.me* link also works.
3. **Enregistrer**. The store shows the new number within a few minutes.

> Leave the field empty and every WhatsApp button disappears from the store (useful when nobody can answer, for example during a holiday). The phone number and Instagram stay.

2. What customers see on the website

Eleven places send the customer to your WhatsApp, each with a message ready to send so you know at once what she is talking about.

Where	What it does
Product page: « Une question ? Demandez sur WhatsApp » «عندك سؤال؟ اسألي عبر واتساب»	Opens a message with the **product's name and link** already in it. You see straight away which piece she is asking about.
Help bubble (bottom corner, every page)	The assistant panel has a **WhatsApp** button. When the assistant can't answer, it also suggests WhatsApp.
Menu (☰) and footer	A WhatsApp button in the menu and a WhatsApp icon among the social links at the bottom of every page.
Contact page	A big green « Écrire sur WhatsApp » button next to the contact form.
Boutique page (/boutique)	WhatsApp next to Call and Directions, with the shop's address and opening hours.
Order tracking page	« Une question sur cette commande ? · Écrire sur WhatsApp » with her **order code** already in the message.
Thank-you page (after ordering)	« M'envoyer le lien sur WhatsApp »: she sends **herself** the private tracking link of her order, to find it later.
« Partager » on a product	Shares the product to any WhatsApp chat or group (the phone's share menu, or WhatsApp directly).
Link previews	Any shop link pasted in WhatsApp shows the product's **photo, name and price**, not a blank link.

Size guide	The tips say « Entre deux tailles ? … écrivez-nous sur WhatsApp ».
Where orders come from	Visits arriving from a WhatsApp link are counted as **WhatsApp** in Statistiques → Sources, and so are the orders they lead to.

Product page (French): the green WhatsApp button under the size and quantity.

The same page in Arabic.

3. What the team uses in the admin

In the admin, a green **WhatsApp** button opens a chat with **the customer's** number and a message suited to the situation. Several of them also note the contact in the order's history, so the whole team knows she was contacted.

Where	What it does
Telegram, each new order	The order message in the team's Telegram group has a **WhatsApp** button: a **confirmation message in her language** (Arabic or French) with the order code, amount, delivery type and wilaya.
Commandes الطلبات → an order	Four big buttons: **Appeler** · **WhatsApp** · **SMS** · **Noter**. WhatsApp opens the confirmation message, and the contact is **written in the order's history** (with your note if you add one).
Expéditions → Échecs de livraison توصيلات فاشلة	For a parcel the courier couldn't deliver: WhatsApp with « le livreur n'a pas pu vous livrer votre commande … Quand êtes-vous disponible ? ». The contact is counted on the follow-up.
Clients الزبونات → a customer	A WhatsApp button on her profile, with « Bonjour [name] 🌸 ».
Contact رسائل الزبونات (messages)	Reply to a contact-form message on WhatsApp: « … suite à votre message ».
Notifier الإعلام → waiting customers	When a size comes back in stock, each customer who asked for it is listed. One tap per number sends « Bonne nouvelle : [product] est de retour ». Then **Marquer comme prévenues**.
Vente au magasin البيع في المحل → WhatsApp	Records an order a customer sent you **on WhatsApp**: it joins the orders, already confirmed, and the stock is updated.
Ventes and Statistiques	Sales by channel, with WhatsApp shown separately, so you see what WhatsApp brings each month.
Avis الآراء	A nice review received on WhatsApp can be typed in and published (without the « Achat vérifié » badge, which is only for delivered orders).
Équipe الفريق	New: an invitation or « mot de passe oublié » link is sent to a team member with **Envoyer sur WhatsApp**.

Removed on 16 October 2026: the abandoned-carts list (« Paniers ») and its WhatsApp reminders, at the owner's request. Saved checkouts are no longer stored.

4. Step by step

4.1 Confirm a new order on WhatsApp

1. A new order arrives in the Telegram group (or in **Commandes** → **À confirmer**).
2. Tap **WhatsApp**. WhatsApp opens on her number with this message (in her language):

> *Bonjour Amina 🌸 Ici Henine Boutique. Nous confirmons votre commande HN-4K7P (5 400 DA), livraison à domicile à Alger. Merci !*

1. Check the message, send it, and wait for her answer.
2. She agrees: tap ✅ **Confirmer** (in Telegram or in the order). No answer: 🚫 **Injoignable**, and set a time to call back (Telegram reminds the team).

Calling first and sending WhatsApp only when she doesn't pick up works best: a call confirms faster and cuts fake orders.

4.2 Note a WhatsApp contact in the order's history

1. Open the order in **Commandes**.
2. Tap **WhatsApp**: a small box opens under the buttons.
3. Add what she said (e.g. « préfère être livrée samedi ») and save. It appears in **Historique** with your name and the time.

4.3 Record an order received on WhatsApp

1. Admin → **Vente au magasin** (or **Ventes** → « Vente manuelle »).
2. Choose **WhatsApp** at the top.
3. Tap the pieces and sizes, type her name and phone, choose the wilaya and home / office delivery.
4. Tap the save button once. The order is created **confirmed** and the stock is taken off the website at once. A second tap by mistake does not create a second order.

4.4 A parcel couldn't be delivered

1. Admin → **Expéditions** → **Échecs de livraison**.
2. Tap **WhatsApp** next to the customer: the message asks when she is available.
3. Write down her answer (new day, new address) and choose the result, e.g. « Nouveau passage demandé », then ask the courier for the new delivery.

4.5 Tell waiting customers that a size is back

1. Put the stock back (**Stock** → Réception, or tap the number).
2. Customers who turned on notifications are told automatically.

3. The others: Notifier → the product's card → tap each number: the « est de retour » message is ready.
4. When done: **Marquer comme prévenues**.

4.6 Answer a message from the contact page

1. Admin → Contact : the newest messages first.
2. If she left a phone number, tap WhatsApp to answer there; otherwise call or reply by phone.

4.7 Share a product or a promotion on WhatsApp (and know what it sells)

1. Open the product on the website and tap **Partager** → WhatsApp (chat, group or **Status**). The link shows its photo and price.
2. To **measure** what WhatsApp brings: Admin → Sources المصادر → next to WhatsApp, 📋 **Lien de suivi** copies the shop's link marked « WhatsApp ».
3. Share that link (Status, groups). Visits and orders that come from it are counted under WhatsApp in Sources. For one campaign, add *&utm_campaign=statut-aid* at the end: it gets its own line.

4.8 Invite a team member with WhatsApp

1. Admin → Équipe الفريق → **+ Inviter quelqu'un**.
2. Name, email, then choose her role card (Confirmatrice, Préparation / Stock, Marketing…).
3. **Créer l'invitation** → 💬 **Envoyer sur WhatsApp** → choose her chat. The link works 7 days, once.

4.9 Change the shop's WhatsApp number

See part 1: Paramètres → Contact & réseaux → WhatsApp → Enregistrer.

5. Good practice and limits

Use WhatsApp Business (free) on the shop's phone: quick replies (« / » + shortcut) for answers you send often, labels (New order, Paid, To deliver), and away messages outside opening hours.

One phone, one number: the number in Paramètres should be a phone the team actually watches all day. A message that waits a day is often a lost sale.

Customers' privacy (law 18-07): never forward a customer's address, phone or screenshots to other groups. Delete chats of customers who ask you to erase their data (Admin → Clients → « 🧹 Effacer ses données »).

Fake orders: an order nobody answers on the phone or WhatsApp after 48 h holds stock for nothing. Commandes shows « Libérer le stock » for these: cancel them (reason « injoignable ») once the team has tried.

What the shop does NOT do by itself: it never sends WhatsApp messages automatically. Every message is opened, checked and sent by a person. Automatic messages (for example « your parcel has left ») would need the paid WhatsApp Business Platform from Meta: a verified business, approved message templates, and a cost for each conversation. It isn't set up, to stay on free tools.

Telegram stays the team's notification channel: new orders, reminders, the evening report.

Henine Boutique · henineboutique.com · This guide matches the shop as of 16 October 2026.
